

The default license of this repository is the MIT License (copied below), but LICENSE files in subdirectories override this default. As a result, the majority of the source code falls under the MIT license, however, some parts are under two different non-commercial licenses: These parts are

- a) the Genome Browser Web CGI programs, are under a non-commercial license by UC
- b) the BLAT program suite, licensed by Kent Informatics and under a different non-commercial license. Their directories are listed below.

As a result, if you are a non-commercial entity, you can use all the source code for free. However, if you are commercial, you may need to buy a license if you want to install a web-based Genome Browser locally or use BLAT locally, either as the blat/gfServer/gfClient command line programs or the webBlat GUI running locally on your servers.

All other UCSC Genome Browser command-line tools and their required libraries are released under the MIT License. This includes our various file format converters, such as bedToBigBed and wigToBigWig, and any tools to create files needed for track hubs. They can be redistributed in any way necessary.

The following sections list all licenses and which directories are covered by which one.

FREE Licenses:

1. As described above, the default is the MIT license (attached below)
 - this includes, for example, all code to read and write the Genome Browser file formats, such as bigBed and bigWig, and the command line tools for these, bedToBigBed, wigToBigWig and the tagStorm tools and the parasol job scheduler.
 - also, third-party code for reading BAM files bundled for convenience, in src/htslib (MIT)
2. A modified BSD license for src/htslib/cram/, see src/htslib/LICENSE. Copyright (C) 2012-2014 Genome Research Ltd.
3. A public domain "with attribution" license for sorting bigWig files, see src/optimalLeaf/LICENSE

NON-COMMERCIAL licenses:

4. A non-commercial license from UC for the genome browser interactive web code in the following subdirectories of src/hg/ (see the LICENSE files in these directories):
cgilib hgApi hgCollection hgFileSearch hgFileUi hgGateway
hgGene hgGenome hgIntegrator hgPal hgPcr hgPhyloPlace hgPublicSessions
hgSession hgSuggest hgTables hgTrackUi hgTracks hgVai hgc hubApi near
visiGene liftOver
5. A non-commercial license from Kent Informatics for the BLAT and isPCR code in src/blat/, src/isPcr and src/jkOwnLib/, for more information see <https://genome.ucsc.edu/license/> and <http://www.kentinformatics.com/>

See <https://genome.ucsc.edu/license/> for more details and on how to obtain a license for commercial use for the case (4) and (5): Commercial users interested in the interactive Genome Browser web software listed under (4) should contact genomebrowser@ucsc.edu. Those interested in BLAT, so any code listed under (5), should contact kent@soe.ucsc.edu.

The code in src/htslib is distributed under a dual license as noted in the LICENSE file in that directory.

Mandatory acknowledgements for third party open source libraries that are used but not distributed as part of this source tree are provided at <https://genome.ucsc.edu/license/>
